HASHIMOTO'S NUTRITION

MONTH 1

Set up & measure

MONTH 2

Live it & adjust

MONTH 3

See the proof

TARGET

70 → 60 kg

SECTION ONE

Your file.

Everything below comes from your own intake and your own report. Nothing here is assumed.

Poonam Nikam

ACTIVE

39 • female • Hypothyroidism

HEIGHT

150_{cm}

WEIGHT

70_{kg}

BMI

31.1

TARGET

60_{kg}

ON FILE

Diagnosis — Hypothyroidism
Currently prescribed — Eltroxin 150 mcg
Also noted — blood pressure
Also noted — low calcium
Also noted — thyroid nodule

YOUR DAILY PATTERN

Work — seated, most of the day
Movement — none currently
Cooking time — short, on weekdays
Knees — painful under load
Sitting — painful after a while

YOUR DOCTOR'S SIDE

Your prescription, your blood pressure, your calcium and your nodule stay with your doctor. I build the food and the movement around them, and I will never ask you to change anything you have been prescribed.

YOUR NINETY DAYS, AT A GLANCE

WEEK 1

Consultation, full blood panel, plans built

WEEKS 2—4

Food and movement become routine

WEEKS 5—8

The flat stretch. Expected, and planned for

WEEKS 9—12

Second panel, photos, full review

SECTION TWO

What you actually live with, daily.

IN YOUR WORDS

“Half day mein thak jati hoon. Baithti hoon toh dard hota hai. Do saal se face kar rahi hoon.”

Morning fatigue

Tired before the day starts

Exhausted by midday

Half the day and you're done

Body pain

Widespread, most days

Knee pain

Worse under load

Hair fall

Ongoing

Dry skin

Persistent

Brain fog

Hard to hold a thought

Procrastination

Starting anything is heavy

Two years, fifty thousand rupees, 1.5 kg

That is not a willpower problem — you kept going for two years. It is what happens when you are handed a list of foods and no measurement behind it. Your report from 10 May shows **one thyroid marker: TSH 1.77, inside the lab's range.** Free T3, Free T4 and Anti-TPO were never tested. Neither were Vitamin D, B12 or ferritin.

You have been judged on one number out of four. The first month fixes that.

CHAPTER TWO

You've been judged on one number out of four.

Here it is exactly as it reads, with no interpretation from me — that part belongs to your doctor.

One marker tested. Three missing.

TSH is the signal your brain sends. It doesn't show how much hormone your body actually converts and uses, and it doesn't show whether your immune system is involved. Vitamin D, B12, ferritin and fasting insulin aren't there either — and every one of them affects how you feel in the morning.

Nobody is going to know what those say until they're measured. That's the first thing we do, and it's why the plan starts with a conversation and a test, not a diet chart.

Three pillars, working together or not at all.

01

Fix the root

Your weight won't move despite trying multiple diets, and you feel constantly low on energy. That's because the root — your thyroid and hormonal health — hasn't been addressed. It's like pressing the accelerator with the handbrake on. So we track your markers, understand the gaps in your day, and use hormone-supportive nutrition and routine to reset your metabolism. Your body starts responding again, and stops feeling like it's working against you.

02

Fuel the body

You're tired of complicated diets that cut out Indian food and leave you feeling deprived and guilty. So the second pillar is about fuelling the body, not starving it — simple Indian home-cooked meals built to support thyroid healing. You eat smarter, feel more energetic, and still enjoy your food. It's like charging your phone properly instead of running it on 5% all day.

03

Flow into fitness

You don't have the energy or time for long workouts, and your joints hurt if you push. So we take a low-impact, lifestyle-friendly approach: joint-friendly routines, home or gym, gradual progression. We build your sleep and daily rhythm alongside it, so you naturally feel stronger and more consistent instead of forcing it.

These three work in sync. If one isn't properly implemented, the strategy doesn't hold. So to help you execute it, five things come with it — they're on the last page.

Set up, and measure

The first month is not about the scale. It is about getting the four markers measured, getting food you will actually cook, and getting movement your knees will tolerate. Everything after this stands on it.

WHAT YOU DO

- ✓ Sign in and set your password
- ✓ Get the full panel done
- ✓ Upload the report
- ✓ Start the plan on the day you feel ready

WHAT I DO

- ✓ 60-minute consultation
- ✓ Read your report with you
- ✓ Build your nutrition plan
- ✓ Build your training plan

Your way in

One link, one password you choose yourself. It opens on your phone like any other app — nothing to install from a store, nothing to keep updated.

- ✓ Works on the phone you already have
- ✓ Visible to you and me. Nobody else.

You will not need a manual for this.

Everything, on one screen

No hunting. Your plan, your check-in, your reports and me — four taps from the front page. On the days you have no energy to look for anything, it is already there.

- ✓ Today's focus, so there is one thing to do
- ✓ Your week count, so progress shows before the scale moves

Four taps. That is the whole app.

Your report, uploaded

Photograph the page or send the PDF. The app reads the markers and the date off it — you never type a number from a printout.

- ✓ Every report you upload stays in one place
- ✓ It reads the date off the report, not the day you uploaded

One upload. That is the whole job.

All the markers, finally

Once the full panel is done, this is your Health page. Every marker, its value, and the lab's own range beside it. Anything outside that range is flagged for your doctor — never explained away by an app.

- ✓ In range gets no badge and no fuss
- ✓ Out of range points at your doctor, in amber

One number out of four becomes four out of four.

Your plate, from your kitchen

Not a diet chart. Real portions of the food you already cook, measured in katoris rather than grams, and built to the calorie number your body actually needs at 70 kg heading for 60.

- ✓ Roti, dal, sabzi, curd — nothing exotic
- ✓ Breakfast shown here. The full day arrives when you start

Cooked in ten minutes, on a weekday, by you.

Movement your knees agree with

You told me your knees hurt and sitting is painful. So this starts seated and supported, stays short, and never asks you to jump. Every movement has a demo you can watch first.

- ✓ Ten to twenty minutes, not an hour
- ✓ It gets harder only when you are ready

Nothing here needs a gym you have not joined.

Live it, and adjust

Month two is where a plan either becomes a habit or becomes a PDF nobody opens. So the app asks you for five minutes a week, and I answer every one of them. The plan changes when your body does — not on a fixed schedule.

WHAT YOU DO

- ✓ Tick your meals as you eat
- ✓ Log your sessions
- ✓ Submit your weekly check-in
- ✓ Message me whenever

WHAT I DO

- ✓ Read every check-in
- ✓ Adjust food and training
- ✓ Biweekly deeper review
- ✓ WhatsApp, same day

SCREENS IN THIS MONTH

TICKING OFF THE DAY

TWENTY MINUTES, DONE

FIVE MINUTES, EVERY WEEK

REVIEWED, NOT JUST COLLECTED

Ticking off the day

Two taps a meal. It is not for me to police you — it is so that when a week goes badly we can both see exactly where, instead of guessing.

- ✓ The streak that keeps the small days worth doing
- ✓ Breakfast shown here. The full day arrives when you start

Two taps. Not a food diary.

Twenty minutes, done

Open the session, watch the demo if you want it, log the set. The app remembers what you lifted last time so you are never guessing where to start.

- ✓ Every movement has a demo
- ✓ Your last session's numbers are already there

Short enough that you will actually do it.

The screenshot shows a mobile app interface for a weekly check-in. At the top, there's a back arrow and a progress indicator with 10 dots, the first of which is filled. Below this is a section titled 'ENERGY LEVEL' with a slider ranging from 'Drained' to '6'. The slider is positioned at 6. Below the slider is the question 'How energized do you feel today?'. The next section is 'MOOD' with five circular icons representing different mood levels, from sad to happy. The fourth icon (smiling) is selected. Below this is 'SLEEP QUALITY' with a slider ranging from 'Poor' to '5'. The slider is positioned at 5. The next section is 'STRESS LEVEL' with a slider ranging from 'Relaxed' to '6'. The slider is positioned at 6. At the bottom, there is a large green 'Continue' button. Below the button, a small text note reads: 'Example answers, here to show what this screen looks like part-way through a Week 6 check-in. Not Poonam's own numbers.'

Five minutes, every week

Weight, energy, sleep, mood, and how your symptoms are behaving. Sliders and taps — there is almost nothing to type.

- ✓ About five minutes, once a week
- ✓ Half-finished check-ins are saved, not lost

The single most useful five minutes of your week.

Reviewed, not just collected

Your check-in does not disappear into a database. It comes back with a reply and with what changed since last week — up, down, or the same.

- ✓ Every check-in gets a reply
- ✓ No change is shown as no change, not as failure

Somebody is actually reading it.

See the proof

Month three is when the data becomes an argument. Three months of weight, energy and sleep on one line, a second blood panel beside the first, and photographs you could not have taken later.

WHAT YOU DO

- ✓ Repeat the blood panel
- ✓ Take your week-12 photos
- ✓ Review the whole quarter with me

WHAT I DO

- ✓ Compare panel to panel
- ✓ Read the trend, not the day
- ✓ Plan the next quarter

SCREENS IN THIS MONTH

YOUR MARKERS, ACROSS THREE TESTS

WEEK 1 BESIDE WEEK 12

WHERE TWELVE WEEKS LANDS

← My Health

Example figures. Only the 10 May TSH of 1.77 is measured — the rest shows how this page reads once the full panel is repeated.

Trends

TSH T3 T4 Vit D B12 Ferritin

Shaded band = the range printed on your report, 0.35—4.94 mIU/L. Your doctor's target may differ.

Same three reports

	10 May	14 Jun	18 Jul
● Vitamin D ng/mL • range 30—100	18	22	29
Vitamin B12 pg/mL • range 200—900	240	310	355

● Vitamin D sits outside the printed range on all three reports — worth raising with your doctor.

Compared against the range printed on each report.

Your markers, across three tests

The same markers, plotted across every report you have uploaded. This is the view that tells us whether something is moving — and it is the view you take to your doctor.

- ✓ Every report you ever upload lines up here
- ✓ The lab's own range drawn behind the line

One test tells you a number. Three tell you a direction.

Week 1 beside Week 12

The photographs you take in week one are the only ones that cannot be taken later. Same pose, same light, side by side — and they usually show what the scale does not.

- ✓ Taken in week one, before anything changes
- ✓ Private to you and me

The scale lies more often than these do.

Where twelve weeks lands

Weight, energy, sleep and mood on one chart, across the whole quarter. Five minutes a week for twelve weeks turns two years of guessing into something you can point at.

- ✓ Your own numbers, not an average
- ✓ Reviewed with me every fortnight

This is the page that earns the next quarter.

WHERE THIS GOES

Week 1 today. Week 12 is what we're aiming at.

The right-hand column is a **target, not a promise**. It's the plan we work to — and the app will show you the real numbers every single week, whether they match this or not.

One thing I'd rather you hear now than in week six

This won't be a straight line. With a thyroid condition the usual shape is a good first few weeks, then a flat stretch somewhere around week five to eight where the scale simply stops. That's not you failing and it's not the plan failing — it's the ordinary shape of it, and the app will tell you so at the time rather than letting you assume the worst.

WHAT COMES WITH IT

Five things, so the strategy actually gets done.

1 **Thyroid & lifestyle consultation call**

A 60-minute deep-dive where I go through your blood reports, your lifestyle and your symptoms to work out the root causes — and we both get clear on what's actually been blocking progress.

2 **Customised Indian nutrition plan**

Built from that call — Indian meals you already eat, designed around thyroid health and sustainable fat loss. You get it as a PDF and inside the app, so it's there whichever way you prefer.

3 **Low-impact custom training plan**

Fully personalised to your routine, home or gym, with demo videos and clear goals. Easy on your knees, and built to raise your strength and energy steadily rather than all at once.

4 **Weekly check-ins & biweekly reviews**

Every week we check what's working. Every two weeks we go deeper — weight, energy, mood, sleep and training, reviewed together so the plan changes when your body does.

5 **Unlimited WhatsApp support**

Direct access to me for real-time questions and help, so you're never stuck at 9pm wondering whether something is allowed.

BONUS

Lifetime access to my private client community — so you stay supported even after the programme ends.

YOUR FIRST WEEK

Nothing here needs you to be different.

It needs the four markers measured, one plan built around the food you already cook, and someone checking in every week. That's it.

- ✓ **Day 1** — your 60-minute consultation. Reports, symptoms, and where the gaps actually are.
- ✓ **Day 2** — you get your app login, and your nutrition and training plans land inside it.
- ✓ **Day 7** — your first check-in. Five minutes. I read every one.
- ✓ **Week 12** — we look at the whole picture together, with twelve weeks of your own data behind it.

Bring your latest reports to the call. If the four markers haven't been done, that's the first thing we sort out — through your doctor.
